

THE
TESTMART

Testing Finops

TESTING

Testing Finops is difficult because:

- Need a combination of FinOps and ERP experience which is hard to find
- Experts are expensive
- Need to pull SME's out of the business causing disruption
- Mission critical software a high risk
- Unknown updates, testing your own software is easier, you know the expected changes, can plan out the automation to work with the changes
- Automation tools often don't work, because finops is complex, or requires lots of custom maintenance

Manual Testing

Disruption to business and job dissatisfaction

Automated Testing

Difficult to build from scratch and hard to maintain

The Test Mart

Rapid setup and maintained by FinOps version

THANK YOU

**Falling behind on your releases, or
worried bugs following a Finops
upgrade, contact us to help**
