Key Steps

1. Install the Test Capture Extension 0:01

- Navigate to this link in either Google Chrome or Microsoft Edge

- Click 'Add to Chrome' or 'Add to Edge'.

- Confirm the installation by clicking 'Add Extension'.

- Pin the extension to your browser for easy access by clicking on the puzzle icon and selecting 'Pin'.

2. Navigate to the Web-Based Application You'll Perform the Recording In 0:47
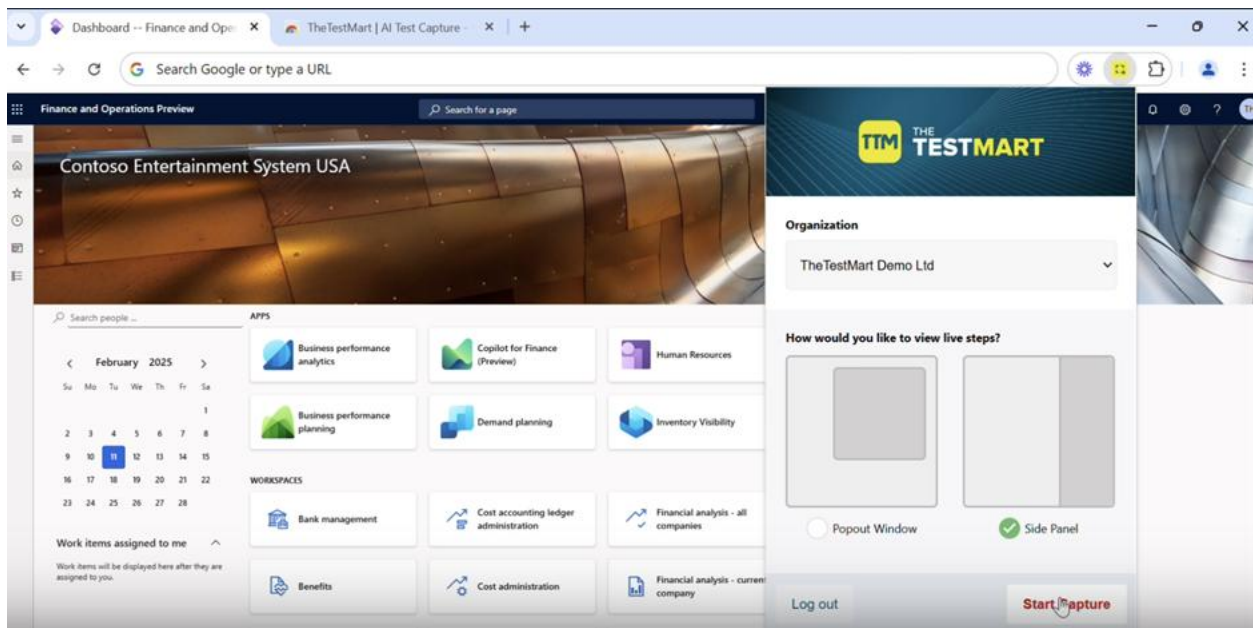

- Open the web-based platform where you will create the test, such as Finance and Operations.

- Click on the newly installed TestMart Test Capture extension to initiate the recording process.

3. Select Server and Log In 1:13

- Ensure 'Production' is selected as the server.

- Log in using your TestMart username and password if prompted.

4. Start Recording the Test 2:00

- Choose your preferred view for live steps (e.g., side panel) and click 'Start Capture'.

- Begin interacting with the platform to record the test steps.

5. Add Verification Steps 3:00

- To add a verification step, select the verification option in the side panel.

- Choose the field to verify and specify the expected value (e.g., ensure customer group is '10').

6. Stop Recording and Review 5:00

- Click 'Stop' to end the recording.

- Review the recorded steps in the playback to ensure accuracy.

7. Submit the Recorded Test 7:00

- Click 'Submit' to send the test to the Test Mart team.

- Ensure the checkbox for 'Send to Test Mart for conversion' is checked if you want your recorded test to be developed into an automated script by TheTestMart team. *Not selecting this checkbox will save the recorded test to your TestMart Library but will not create a ticket for the TestMart team to start developing.

- Fill out any additional fields such as test name and description.

8. Confirmation of Submission 9:00

- After submission, you will receive a notification confirming the test has been sent.

- Check your email for confirmation from the TestMart team.

Important Considerations

- Always ensure that 'Production' is selected before logging in to avoid recording tests on the wrong server.

- Double-check that the 'Send to TheTestMart for conversion' checkbox is checked before submitting to ensure the test is created as a ticket and will be worked on by the TestMart team.

- If you are not ready to submit the test, you can save it to your library instead of submitting it by not selecting the 'Send to TheTestMart for conversion' checkbox.

Tips for Efficiency

- Familiarize yourself with the Test Capture tool interface before starting the recording to streamline the process.

- Use a consistent naming convention for tests to make it easier to track and manage them.

- Consider preparing any necessary documentation or notes before starting the recording to enhance the submission process.
